

Facilitator Window

The Facilitator Window enables a person not wearing a VR headset to control the Ovation software for the user in the headset. It is a desktop window on the computer that offers various hotkeys.

Hotkeys are categorized in the General, Venues, and Demo Setup tabs. Some examples are opening/closing the menu, starting a Recording, going to a different venue, and starting the tutorial.

The Facilitator Window is separate from the Mirror Window, which displays what the user wearing the VR headset is looking at.

Before the Facilitator Window, facilitators would need to verbally direct new users where to look and what to select. This can be cumbersome, as the user is simultaneously trying to listen and follow the facilitator's instructions while also getting acclimated to wearing the headset, holding the controllers, and interacting with Ovation's menus and input system. Now the facilitator can assist from behind the scenes.

Opening the Facilitator Window

The Facilitator Window can be opened from the Settings menu, by hitting 'F10', or automatically when a user signs into the software.
